

PRESS RELEASE (For Immediate Release)

TallApplications Releases DeepSea Obfuscator 2008
“Finally a fast, effective and affordable Obfuscation tool”

(February 18, 2008) – TallApplications announces the release of DeepSea Obfuscator 2008, a smart and effective .Net obfuscation tool.

‘DeepSea Obfuscator 2008 makes obfuscation an intuitive and integrated part of your product development.’

Features!

- ✓ **Out of the box protection** - Just run DeepSea Obfuscator and your .Net assemblies are protected.
- ✓ **Declarative obfuscation** - Integrate your obfuscation settings where they are most appropriate: in your source code.
- ✓ **Assembly merging** - Use separate assemblies internally for testing and architecture purposes but deploy to your customers as a single assembly for minimal footprint.
- ✓ **Fast** - DeepSea Obfuscator will get the most out of your multi-core CPU for optimal performance.
- ✓ **Build tooling friendly** - DeepSea Obfuscator comes with VisualStudio, MSBuild, NAnt and command line integrations.
- ✓ **Developer oriented license model** - One developer can install DeepSea Obfuscator on any machine under the same user account. (This includes the workstation on your desk, the build server and your laptop at home.)

DeepSea Obfuscator 2008 is compatible with the Microsoft.Net framework versions 1.1 – 3.5 and runs on Windows XP, Windows Server 2003 or Windows Vista.

DeepSea Obfuscator 2008 is available now and be evaluated for free!

Competitive upgrades

Customers of competing products can purchase DeepSea Obfuscator 2008 at an unbelievable 50% off the regular price!
